Introduction

Many organizations provide Canteen as an additional subsidized facility to their employees as a welfare measure. The usage of the canteen by the employees depends on many factors like centralized food distribution center with swift and simplicity in operations. We done much site survey & come with following observation:

- Peak Hour Crowd Count – 2000 to 3000 Persons
- Maximum crowd at Meal Counter
- Problems faced in Managing and handling the cash
- Problems faced in keeping material records for stores and making a projection for buying a material
- Problems faced in working out for each stall as a cost center.

Objectives

Develop a desktop application, which can easily and effectively manage ordering and billing of food items. Reduce paperwork. The project fully technology based. Majority people use technology. So, we create this and give our customer this opportunity. First of all, our target is to create everything in easily. Customers can order food very easily. Customers can take their receipt easily. Customer's information is secured in our database. Without our manager/admin no one can see customer's information even not a waiter or chef. As a customer, they can see our product, price and search the product.

Problem Statement

The main aim of this project to save valuable time of customers. Time is very important for us. So, everyone can order food at the same time. Recent time when people visit a restaurant they have waited for a waiter. But for using this system customers can easily order food and pay their bill. It's totally secure for every customer. So, no tension about security. Customers can collect their receipt when they pay their bill. Customers can pay their bill in cash, credit/debit card or other money transfer application. So, this is our facilities of the project. There are no difficulties. Everyone can use our system. Have a nice day.

Features

- ✓ Admin Login – Admin can access database, all the customer's, employee's information, all the product information.
- ✓ Employee's – Same as admin login but employee can't access database and customer's information. Employee can add product information.
- ✓ Customer – Customer can see all the product and order food and collect their receipt.

Conclusion

This is achieved through an easy-to-use graphical interface menu option. The users can add any number of items to the cart from any of the available food categories' by simply clicking the add to cart button for each item. Once item is added to the cart, user is presented with detailed order to review or continue shopping.
